Improving Chronic Disease Care and Outcomes

Solutions for a healthier population

More than half of all American adults currently live with one or more chronic diseases.¹ Delivering a highly personalized health care experience, tailored to a person’s unique needs, is key to helping prevent and manage costly and complex chronic diseases.

CVS Health® provides frequent touchpoints to help patients manage their conditions, improve health outcomes and reduce costs.

Expanding Access to Preventive Care
Effective preventive care helps people avoid or delay disease, keeps conditions from worsening and reduces costs.¹ We’re making it easier for patients to access helpful resources.

Expanding Medication Adherence
Patients with chronic conditions often have complex regimens to follow in between their doctors’ visits. Our innovative programs are improving health outcomes and reducing costs.

Engaging Patients Where They Are
A national study revealed that 91% of patients need more help with chronic disease management.³ Here’s how we’re using digital and community-based solutions to help.
