

\$41B/year

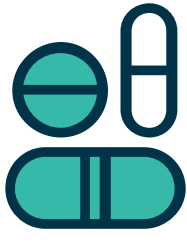

health care costs from

hospital readmissions

1 in 7

patients are readmitted within 30 days

2/3

hospital readmissions are due to medication issues (non-adherence and adverse drug reactions)

up to

3/4

readmissions are preventable

A new CVS Health Research Institute study* found

50%

lower risk of readmission

as a result of pharmacist intervention through an insurer-initiated medication reconciliation program

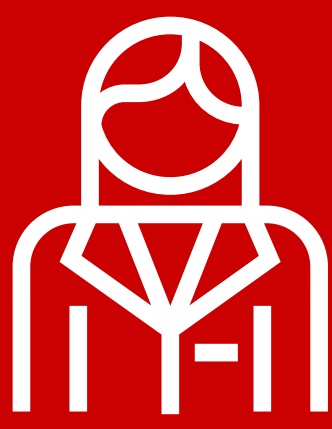

\$2 in savings for every \$1 spent

\$1,300 per patient total savings**

More successful transitions

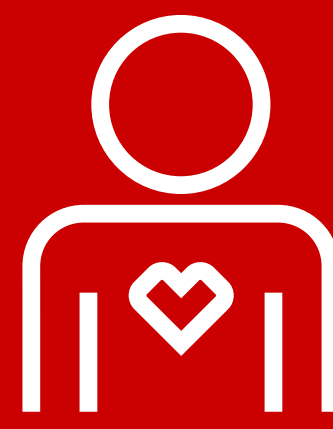

Pharmacists

Review medications

Counsel patients on adherence and drug safety

Patients

Better understand drug regimen

Can access pharmacist support for 30 days
