

Taking Steps to Address Opioid Misuse and Abuse

Programs to help address misuse and abuse of prescription opioids

Too many people have been impacted by opioid abuse. CVS Health serves patients in communities all across the country, and we are dedicated to helping make a difference.

CVS Health has made an enterprise-wide commitment to help address the abuse and misuse of prescription opioids.

Increasing Access to Safe Disposal

Encouraging Appropriate Utilization

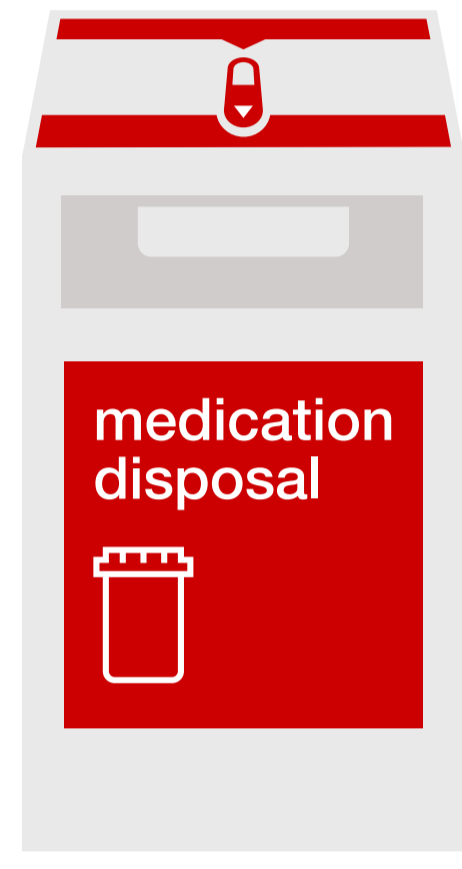

Expanding Access to Life-Saving Antidotes

Educating Patients and Communities

Supporting Local Recovery Programs

Increasing Access to Safe Disposal

Disposal of unwanted or unused medications locally reduces the likelihood of misuse or diversion. We're providing secure disposal options close to home.

Nearly **2K** drug disposal units,

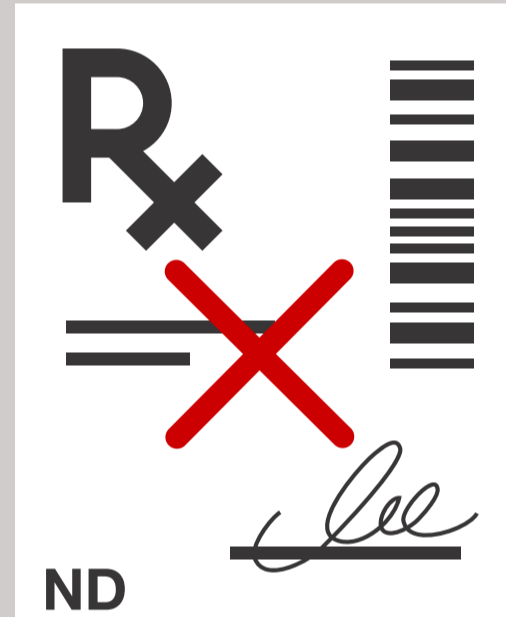

including 1K in-store disposal kiosks and more than 950 disposal units donated to community police departments across the country

715K pounds

of unwanted medications collected since 2014

Encouraging Appropriate Utilization

Reducing the amount of unnecessary opioids prescribed can help reduce the potential for abuse. We've implemented criteria to help CVS Caremark® clients manage opioid utilization in a manner consistent with the Centers for Disease Control Guideline.

71.9% decrease

in the number of prescriptions for more than a 7-day supply among clients adopting our utilization management criteria

94.3% of prescriptions

are covered for a 7-day supply or less among clients adopting our utilization management criteria

Expanding Access to Life-Saving Antidotes

The opioid overdose-reversal drug, naloxone, can help save lives. We're implementing an industry-leading program to increase access to naloxone.

Life-saving naloxone is available in **48 states**

to patients at CVS Pharmacy locations, without an individual prescription

9.8K CVS Pharmacy locations

have in-store signage to educate patients about the availability and accessibility of naloxone

Educating Patients and Communities

Education on the dangers of misusing prescription drugs can encourage safer and more secure practices. We're delivering education to teens, parents and patients new to an opioid prescription.

More than **470K** students and parents reached

through Pharmacists Teach® since 2015, a prescription drug prevention education program led by CVS Pharmacists

CVS Pharmacists provide counsel to patients

on safe opioid use and the dangers of addiction when filling a new opioid prescription

Supporting Local Recovery Programs

CVS Health is supporting local recovery programs to improve access to recovery and treatment options in communities.

115 physicians supported

who are working to increase access to medication assisted treatment

Nearly **350K** patients will be reached

by these addiction recovery programs, improving access to medication-assisted treatment
